Mutual fund investing involves risk. Principal loss is possible. The Fund regularly makes short sales of securities, which involves the risk that losses may exceed the original amount invested. Investing in smaller companies involves special risks, including higher volatility and lower liquidity. Investing in mid-cap stocks may carry more risk than investing in stocks of larger, more well-established companies.

The Russell 1000 Index measures the performance of the large-cap segment of the US equity universe and represents approximately 93% of the Russell 3000 Index. The S&P 500 Index is a capitalization-weighted index of 500 stocks. An investment cannot be made directly into an index.

Market capitalization source is FactSet. Portfolio characteristics, holdings and sector weightings are subject to change at any time.
