

CROMWELL MARKETFIELD L/S FUND

The Fund takes long and short positions in investments that may derive the most benefit from anticipated macro forces. The Portfolio Managers have a long history of anticipating and responding appropriately, as macroeconomic conditions evolve throughout cycles.

3 Reasons to Consider the Cromwell Marketfield L/S Fund:

1. A long/short strategy

The Fund has the ability to adjust its long market exposure based on the Portfolio Managers' macro perspective. By design, the Fund does not have to invest 100% net long in the event of increased market volatility.

Therefore, at the beginning of 2022, the Fund's net long position was approximately 70%, the high end of the range. By March 31, 2023, it was 41%—near the lower end of the range.

NET LONG POSITION
as of 3/31/23: **41.3%**

2. Flexible, actively managed approach

As an actively managed Fund, the portfolio can be allocated to select areas of the global markets. As an example, in 2022, the Fund avoided Technology stocks. While the portfolio never had a large position in this sector, certain holdings were removed in the second half of 2021 and the Fund entered 2022 with a net short position in Technology.

3. Lower volatility than the overall market

We believe the portfolio provides broad diversification in global equities, allowing investors to participate in the global equity markets with potentially lower volatility. Historically, the Fund has provided less risk than the S&P 500 Index, as measured by standard deviation.

The Fund Had a Lower Standard Deviation Over all Time Periods

	3 YR	5 YR	10 YR
Fund (Institutional Class)	13.34	13.47	10.76
S&P 500 Index	19.23	18.64	14.85
% Difference	30.6%	27.7%	27.5%

Mutual fund investing involves risk. Principal loss is possible. The Fund regularly makes short sales of securities, which involves the risk that losses may exceed the original amount invested. The Fund may also use options and futures contracts, which have the risks of unlimited losses of the underlying holdings due to unanticipated market movements and failure to correctly predict the direction of securities prices, interest rates, and currency exchange rates. However, a mutual fund investor's risk is limited to the amount invested in a fund. Investments in absolute return strategies are not intended to outperform stocks and bonds during strong market rallies. Investing in ETFs are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of the shares may trade at a discount to its net asset value (NAV), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Funds ability to sell its shares.

Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. These risks may be greater for emerging markets. Investing in smaller companies involves special risks, including higher volatility and lower liquidity. Investing in mid-cap stocks may carry more risk than investing in stocks of larger, more well-established companies. This risk is usually greater for longer-term debt securities. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Investments in asset-backed and mortgage-backed securities involve additional risks such as credit risk, prepayment risk, possible illiquidity and default, and increased susceptibility to adverse economic developments. The Fund involves the risk that the macroeconomic trends identified by portfolio management will not come to fruition and their advantageous duration may not last as long as portfolio management forecasts. The Fund may invest in derivatives, which may increase the volatility of the Fund's NAV and may result in a loss to the Fund.

Price-to-earnings measures the current share price relative to its earnings per share. Standard deviation is a statistical measure of historical volatility.

The S&P 500 Index is a capitalization-weighted index of 500 stocks. An investment cannot be made directly into an index.

Regions and Sectors Exposures are subject to change and are not recommendations to buy or sell any security. Only equities and equity instruments classified in Regions and Sectors Exposures. Options premiums, and not delta exposure, are used in Sectors and Regions Exposures, when applicable. The Global Industry Classification Standard (GICS®) was developed by and/or is the exclusive property of MSCI, Inc. and Standard & Poor Financial Services LLC (S&P). The Morningstar Rating™ for funds, or "star rating," is calculated for mutual funds with at least a 3-year history. Open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable)

Morningstar Rating metrics. The weights are: 100% 3-year rating for 36–59 months of total returns, 60% 5-year rating/40% 3-year rating for 60–119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads. Overall Morningstar rating based on Institutional class shares. MFADX received 5, 4, and 2 stars for the 3-, 5-, and 10-year periods among 173, 154, and 69 Long-Short Equity funds, respectively, as of 3/31/23. MFLDX received 5, 4, and 3 stars for the 3-, 5-, and 10-year periods among 173, 154, and 69 Long-Short Equity funds, respectively, as of 3/31/23. MFCDX received 4, 3, and 2 stars for the 3-, 5-, and 10-year periods among 173, 154, and 69 Long-Short Equity funds, respectively, as of 3/31/23. The Morningstar overall rating for MFADX, MFLDX and MFCDX was 3, 4, and 3 stars among 173 Long-Short Equity funds, respectively, as of 3/31/23.
